or print out and mail completed form to:
Matt Bartels/ Washington Birder 611 N 50th St. Apt 4 Seattle, WA 98103

List Reporting Rules:

Species reported must be consistent with the rules laid out here.

For 2024,

Be sure to adjust for recent lumps like the Redpolls and the Pacific-slope/Cordilleran Flycatcher [along w/ the crow lump from a couple years back if not yet done]

We've added a 5-mile Radius year & life list category this year for those keeping track of this.

We recommend using the eBird status decisions on local countability of non-native species.

We use the ABA listing rules (<https://www.aba.org/aba-recording-rules-and-interpretations/>)

That is, they must be:

1. Within the reporting area and time period when observed, and
2. Alive, wild, and unrestrained when observed.

The state is divided into east and west by the Pacific Crest Trail, which roughly follows the crest of the Cascade Mountains.

Pelagic reports must be of birds observed beyond an arbitrary distance of 2 miles off shore.

Yard lists include species noted while observer was within his own property boundaries, but may include birds that were outside those bounds.

North Cascades National Park category includes the number of species within the National Park boundaries only.

North Cascades National Park Complex includes the number of species within the boundaries of the three units that make up the Complex:

1. North Cascades National Park
2. Ross Lake National Recreation Area
3. Lake Chelan National Recreation Area

· Choose categories of personal interest and report those totals.

· Submit a separate form for each person reporting.
